## VERIFIED PUBLIC RECORD

The public complaint identifies Malikie Innovations Ltd. and Key Patent Innovations Ltd. as plaintiffs, Fenix International Ltd. as defendant, docket 2:26-cv-00757, filing on August 26, 2026 in E.D. Tex., and asserts U.S. Patent Nos. 8,334,847, 7,979,906, 8,392,598, and 9,210,205. The pleading describes Fenix and its subsidiaries as operating the OnlyFans subscription platform.

## LIKELY RESEARCH PURCHASER

**Khue V. Hoang** - Partner, Reichman Jorgensen Lehman & Feldberg LLP; complaint signatory for plaintiffs. The public complaint is signed by Hoang by permission of local counsel and lists his direct firm email. Selecting him as the lead likely purchaser is an analytical inference from that active plaintiff-side role; it does not establish purchasing authority.

**khoang@reichmanjorgensen.com** - publicly printed in the [linked professional source](#); not inferred.

## TECHNICAL FRAME

Public docket indexing identifies the new Fenix matter as an open E.D. Tex. patent complaint filed August 26, 2026 and lists the four asserted patent suffixes.

**Secondary-source limitation:** The technical issue map below is based on the public complaint and its descriptions of the asserted patents, not source code, discovery, claim construction, claim charts beyond the pleadings, or admissible expert evidence. [Open public synopsis](#)

## REPORTED ASSERTED PATENTS

[8,334,847](#) | [7,979,906](#) | [8,392,598](#) | [9,210,205](#)

# Questions likely to require expert input

This issue map is a research plan, not a legal conclusion. The filed complaint, patent exhibits, intrinsic record, and discovery must control.

## 01 Object-selection user-interface behavior under the '847 patent.

Whether the accused web and mobile interfaces implement the claimed object-selection and user-interface mechanisms, and which client-side code, browser behavior, or mobile components perform each step.

**Potential evidence:** Accused client builds; browser/mobile instrumentation; UI recordings; source code; API traces; version histories; and the public claim chart.

## 02 Multifaceted scanning under the '906 patent.

Whether content-processing systems scan a stream or file using multiple categories or stages of analysis, including the complaint's described examples of malware, sexuality, or nudity scanning.

**Potential evidence:** Content-moderation architecture; vendor and model documentation; workflow configurations; dataflow traces; code; audit logs; and claim-chart mapping.

## 03 Client-controlled media-segment selection under the '598 patent.

Whether the platform's video delivery lets a client request media segments with selected qualities, resolutions, or sizes, and how any CDN, player, manifest, or adaptation logic participates.

**Potential evidence:** Player code; HLS/DASH manifests; network captures; CDN configuration; adaptive-bitrate telemetry; test runs; and product/version evidence.

## 04 Streaming-data delivery and display under the '205 patent.

How the asserted streaming-data system maps to OnlyFans video delivery, including data preparation, transport, client receipt, buffering, and presentation.

**Potential evidence:** Streaming architecture; client/server source; network traces; media formats; caching and buffering behavior; device tests; and the public claim charts.

## Questions likely to require expert input

### **05 Allocation of functionality across client, CDN, cloud service, and third-party moderation suppliers.**

Which actor or technical component performs each alleged limitation, and whether evidence supports direct, induced, or contributory infringement theories.

**Potential evidence:** Contracts and service documentation; technical diagrams; source-code ownership; deployment records; APIs; operational logs; and testimony.

# Candidates 1-2 for further diligence

Ranked for preliminary research priority based on subject-matter fit, relevant public work, testimony, and visible diligence burden. This is not a retention recommendation.

## 01 Nick Feamster

Neubauer Professor of Computer Science and Faculty Director of Research, Data Science Institute, University of Chicago

### TECHNICAL FIT

Internet measurement, video technologies, software-defined networking, privacy, and deployed systems fit web/mobile video delivery, client/server allocation, and content-processing evidence.

### RELEVANT WORK

Built early live-television-over-Internet systems and researches network performance and security; official profile states federal technology-litigation expert-witness experience.

### PUBLIC LITIGATION EXPERIENCE

Official University of Chicago materials state that he serves as an expert witness in technology litigation and has federal trial-testimony experience.

### POINTS FOR FURTHER DILIGENCE

Broad systems expert rather than a narrow UI or content-moderation-model specialist; active expert practice requires conflicts diligence.

[Source 1](#) | [Source 2](#)

[Draft email](#) | [feamster@uchicago.edu](mailto:feamster@uchicago.edu) | [public email source](#)

## 02 Vijay Sivaraman

Professor of Electrical Engineering and Telecommunications, UNSW Sydney

### TECHNICAL FIT

Video-streaming delivery, network performance, software-defined networking, and cloud-gaming research fit streaming delivery and client/CDN evidence.

### RELEVANT WORK

UNSW describes architectures and algorithms for video streaming and gaming, including interactive scalable media over software-defined networks.

### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public expert report, declaration, deposition, or trial-testimony record was located in the bounded research used for this packet.

### POINTS FOR FURTHER DILIGENCE

Primarily a network-architecture expert; would need complementary UI or content-analysis expertise.

[Source 1](#) | [Source 2](#)

[Draft email](#) | [vijay@unsw.edu.au](mailto:vijay@unsw.edu.au) | [public email source](#)

## Candidates 3-4 for further diligence

### 03 Henning Schulzrinne

Julian Clarence Levi Professor of Computer Science and Professor of Electrical Engineering, Columbia University

#### TECHNICAL FIT

Internet multimedia, RTP/RTSP/SIP, signaling, quality of service, and network measurement fit streaming-system architecture and protocol questions.

#### RELEVANT WORK

Co-developed RTP, RTSP, and SIP; published more than 250 papers and more than 70 Internet RFCs; former FCC CTO.

#### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public litigation record was located in the bounded research used for this packet.

#### POINTS FOR FURTHER DILIGENCE

Protocol and architecture fit is stronger than product-specific client code, UI behavior, or content-moderation implementation.

[Source 1](#) | [Source 2](#)

[Draft email](#) | [hgs@cs.columbia.edu](mailto:hgs@cs.columbia.edu) | [public email source](#)

### 04 Keith W. Ross

Professor of Computer Science, NYU Abu Dhabi, with affiliated NYU appointments

#### TECHNICAL FIT

Computer networking, voice/video applications, content distribution, peer-to-peer systems, and network performance fit platform-scale streaming and distribution analysis.

#### RELEVANT WORK

Coauthor of Computer Networking: A Top-Down Approach; co-founded Wimba, a voice/video online-learning provider.

#### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public litigation record was located in the bounded research used for this packet.

#### POINTS FOR FURTHER DILIGENCE

Current work emphasizes AI; narrower client UI and scanning-pipeline questions may require another expert.

[Source 1](#) | [Source 2](#)

[Draft email](#) | [keithwross@nyu.edu](mailto:keithwross@nyu.edu) | [public email source](#)

## Candidates 5-6 for further diligence

### 05 Christian Timmerer

University Professor and Head, Institute of Information Technology, University of Klagenfurt

#### TECHNICAL FIT

MPEG-DASH, multimedia adaptation, caching, servers, and immersive-media delivery directly fit media-segment and quality-selection issues under the '598 patent.

#### RELEVANT WORK

Active contributor and editor in MPEG-DASH, MPEG Media Transport, MPEG-V, and MPEG-21 work; publishes adaptive-streaming systems research.

#### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public litigation record was located in the bounded research used for this packet.

#### POINTS FOR FURTHER DILIGENCE

Standards and delivery fit is stronger than U.S.-specific prior-art authentication or proprietary application source-code analysis.

[Source 1](#) | [Source 2](#)

[Draft email](#) | christian.timmerer@itec.aau.at | [public email source](#)

### 06 Pablo César

Group Leader, Distributed and Interactive Systems, CWI; Professor, TU Delft

#### TECHNICAL FIT

Distributed interactive media, real-time communication, media-object control, and quality of experience fit streaming presentation and multiparty platform behavior.

#### RELEVANT WORK

Leads CWI research on distributed media collections and multiparty real-time communication; work has entered MPEG and ITU processes.

#### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public litigation record was located in the bounded research used for this packet.

#### POINTS FOR FURTHER DILIGENCE

Less direct for classic client UI semantics or content-safety/model-processing questions.

[Source 1](#)

[Draft email](#) | P.S.Cesar@cwi.nl | [public email source](#)

## Candidates 7-8 for further diligence

### 07 Touradj Ebrahimi

Adjunct Professor and Head, Multimedia Signal Processing Group, EPFL

#### TECHNICAL FIT

Image and video coding, multimedia compression, quality, media security, and JPEG/MPEG standardization fit video data representation and streaming mechanics.

#### RELEVANT WORK

JPEG standardization convenor, contributor to MPEG-4 and JPEG 2000, and holder of 14 patents; former Sony researcher and AT&T Bell Laboratories consultant.

#### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public litigation record was located in the bounded research used for this packet.

#### POINTS FOR FURTHER DILIGENCE

Deep coding expertise but less direct for HTTP adaptation logic, UI selection, or application-level scanning policies.

[Source 1](#) | [Source 2](#)

[Draft email](#) | [touradj.ebrahimi@epfl.ch](mailto:touradj.ebrahimi@epfl.ch) | [public email source](#)

### 08 Alan C. Bovik

Professor Emeritus, Chandra Department of Electrical and Computer Engineering, University of Texas at Austin

#### TECHNICAL FIT

Video quality, image/video processing, compression, and perceptual measurement fit streaming-video technical questions and any visual-quality evidence.

#### RELEVANT WORK

Developed video-quality models, received a Primetime Emmy, published more than 800 technical articles, and holds multiple U.S. patents.

#### PUBLIC LITIGATION EXPERIENCE

A public USPTO filing identifies his independent expert-witness retention in Microsoft Corp. v. Biscotti Inc., IPR2014-01457; other public records show technical-expert work.

#### POINTS FOR FURTHER DILIGENCE

Best for coding, image processing, and video quality; less direct for UI workflows or content-scanning systems.

[Source 1](#) | [Source 2](#) | [Source 3](#)

[Draft email](#) | [bovik@ece.utexas.edu](mailto:bovik@ece.utexas.edu) | [public email source](#)

## Candidates 9-10 for further diligence

### 09 Mark Handley

Professor of Networked Systems, University College London

#### TECHNICAL FIT

Internet multimedia, RTP/SIP/SDP, congestion control, transport protocols, and deployable network systems fit streaming transport and client/server delivery behavior.

#### RELEVANT WORK

Coauthored Internet standards including SIP and SDP; research includes multimedia conferencing, congestion control, Multipath TCP, and transport systems.

#### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public litigation record was located in the bounded research used for this packet.

#### POINTS FOR FURTHER DILIGENCE

Strong on protocol and transport, but not principally a video-codec, client-UI, or content-moderation specialist.

[Source 1](#) | [Source 2](#)

[Draft email](#) | [m.handley@ucl.ac.uk](mailto:m.handley@ucl.ac.uk) | [public email source](#)

### 10 Ion Stoica

Tony Xu and Patti Bao Chancellor's Chair in Computer Science and Director, Sky Computing Lab, UC Berkeley

#### TECHNICAL FIT

Distributed systems, content delivery, cloud systems, and deployable streaming platforms fit CDN/cloud allocation and platform-scale technical architecture.

#### RELEVANT WORK

Co-founded Conviva Networks, whose technology measures and optimizes Internet video delivery; research includes Chord, Ray, Apache Spark, Mesos, and cloud systems.

#### PUBLIC LITIGATION EXPERIENCE

No candidate-specific public litigation record was located in the bounded research used for this packet.

#### POINTS FOR FURTHER DILIGENCE

Now focused largely on AI and cloud systems; a video-codec or UI specialist may be needed for all asserted limitations.

# Preliminary candidates; no conflicts or availability determination

- Run party, affiliate, counsel, inventor, funder, and technology conflicts.
- Confirm testimony history, exclusions, compensation, publications, patents, and deposition performance.
- Investigate licensing, grants, consulting, commercial interests, and prior technical positions.
- Confirm role fit, availability, and interest only after counsel authorizes outreach.

## ONGOING MATTER-SPECIFIC RESEARCH

Flint Witness Research works in the post-filing window, turning pleadings and public technical records into issue maps, researched candidate slates, and diligence starting points as the case develops.
