

QuanteFi Corporation v. Commscope Holding Company, Inc., et al

Four Wi-Fi patents asserted against Ruckus access points, covering adaptive bandwidth and preamble puncturing, hybrid sector selection and beamforming, MU-MIMO support for legacy devices, and dynamic channel tracking.

Independent preliminary research based on public information.

VERIFIED PUBLIC RECORD

QuanteFi Corporation v. Commscope Holding Company, Inc., et al, No. 2:26-cv-00735, filed 2026-08-21 in E.D. Tex..

LIKELY RESEARCH PURCHASER

Marc A. Fenster - Russ August & Kabat; named matter counsel. The public docket identifies Fenster as the attorney who filed the complaint and opening papers, and the public attorney page prints his email. Selecting the complaint filer as likely purchaser is an analytical inference from that role.

mfenster@raklaw.com - publicly listed on the [official firm biography](#); not inferred.

TECHNICAL FRAME

Four Wi-Fi patents asserted against Ruckus access points, covering adaptive bandwidth and preamble puncturing, hybrid sector selection and beamforming, MU-MIMO support for legacy devices, and dynamic channel tracking.

Secondary-source limitation: This is a preliminary technical frame based on public sources. Filed pleadings, claim charts, discovery, source code, product versions, and admissible evidence must control. [Open public synopsis](#)

Questions likely to require expert input

This issue map is a research plan, not a legal conclusion. The filed complaint, patent exhibits, intrinsic record, and discovery must control.

01 How the accused Ruckus portfolio implements adaptive bandwidth or preamble puncturing and responds to interference.

How the accused Ruckus portfolio implements adaptive bandwidth or preamble puncturing and responds to interference.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

02 Whether hybrid sector selection and beamforming meet the claimed antenna/control sequence.

Whether hybrid sector selection and beamforming meet the claimed antenna/control sequence.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

03 How MU-MIMO transmissions support legacy stations and whether the implementation follows the claimed coexistence mechanism.

How MU-MIMO transmissions support legacy stations and whether the implementation follows the claimed coexistence mechanism.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

04 What firmware versions, chipset features, OTA captures and dynamic-channel logs are required to distinguish enabled capability from actual operation.

What firmware versions, chipset features, OTA captures and dynamic-channel logs are required to distinguish enabled capability from actual operation.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

Questions likely to require expert input

Candidates 1-2 for further diligence

Ranked for preliminary research priority based on subject-matter fit, relevant public work, testimony, and visible diligence burden. This is not a retention recommendation.

01 Andrea Goldsmith

Dean of Engineering and Applied Science and Arthur LeGrand Doty Professor of Electrical and Computer Engineering, Princeton University; Stanford Professor Emerita

TECHNICAL FIT

Wireless communications, adaptive modulation, MIMO and Wi-Fi industry founding experience fit adaptive bandwidth, multiantenna operation and WLAN system behavior. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Authored Wireless Communications and MIMO Wireless Communications; co-founded Plume WiFi and Quantenna.

PUBLIC LITIGATION EXPERIENCE

The reviewed Stanford and Princeton profile materials do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Very senior system theorist; may be less focused on accused firmware/source-code mapping and particular 802.11 implementation history.

[Source 1](#) | [Source 2](#)

[Draft email](#) | andrea@ee.stanford.edu | [public email source](#)

02 Muriel Medard

NEC Professor of Software Science and Engineering, MIT

TECHNICAL FIT

Network coding, error-control coding and reliable wireless networks directly fit LDPC, packet reliability and coded wireless-system issues. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Leads MIT Network Coding and Reliable Communications Group; foundational network-coding publications and commercial activity.

PUBLIC LITIGATION EXPERIENCE

The reviewed MIT profiles do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Coding and reliability strength is less direct for antenna radiation-pattern hardware or product-specific Wi-Fi firmware.

[Source 1](#) | [Source 2](#)

[Draft email](#) | medard@mit.edu | [public email source](#)

Candidates 3-4 for further diligence

03 Robert W. Heath Jr.

Charles Lee Powell Chair in Wireless Communications and Professor, UC San Diego

TECHNICAL FIT

MIMO, multiantenna signal processing and commercial/defense wireless systems fit beamforming, sector selection, MU-MIMO and channel behavior. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Research centers on MIMO systems using multiple antennas and has commercial and defense applications.

PUBLIC LITIGATION EXPERIENCE

The reviewed UCSD institutional materials do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

More cellular/mmWave centered than Wi-Fi product firmware; product-specific standards mapping would still be needed.

[Source 1](#)

[Draft email](#) | rwheathjr@ucsd.edu | [public email source](#)

04 Jeffrey G. Andrews

Professor of Electrical and Computer Engineering and Director of 6G@UT, University of Texas at Austin

TECHNICAL FIT

OFDM, multiuser receivers, wireless LAN/cellular convergence and multiantenna networks fit channel selection, bandwidth adaptation and MU-MIMO. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Led research on cellular and wireless networks; established texts and papers on broadband wireless and multiuser systems.

PUBLIC LITIGATION EXPERIENCE

The reviewed UT materials do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Research emphasis is broader cellular/6G theory rather than accused Ruckus/Sercomm firmware or legacy-device interoperability testing.

[Source 1](#) | [Source 2](#)

[Draft email](#) | jandrews@ece.utexas.edu | [public email source](#)

Candidates 5-6 for further diligence

05 David J. Love

Nick Trbovich Professor of Electrical and Computer Engineering, Purdue University

TECHNICAL FIT

MIMO, feedback, beamforming, massive MIMO and coding theory fit adaptive beam selection, channel feedback and multiuser operation. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Seven patents from Texas Instruments work; publications on limited-feedback MIMO and beamforming.

PUBLIC LITIGATION EXPERIENCE

The reviewed Purdue profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Physical-layer focus is less direct for hotspot registration, access-management software or auction-agent optimization.

[Source 1](#) | [Source 2](#)

[Draft email](#) | djlove@purdue.edu | [public email source](#)

06 Sanjay Shakkottai

Professor and Cockrell Family Chair in Engineering, University of Texas at Austin

TECHNICAL FIT

Network resource allocation, statistical learning and wireless networks fit adaptive bandwidth, scheduling, cooperative agents and utility optimization. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Publications on wireless scheduling, network resource allocation and learning; IEEE Fellow.

PUBLIC LITIGATION EXPERIENCE

The reviewed UT profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Less focused on RF hardware, antenna radiation-pattern implementation and LDPC decoder circuits.

[Source 1](#)

[Draft email](#) | sanjay.shakkottai@utexas.edu | [public email source](#)

Candidates 7-8 for further diligence

07 H. Vincent Poor

Michael Henry Strater University Professor of Electrical and Computer Engineering, Princeton University

TECHNICAL FIT

Information theory, signal processing and wireless networks fit coded communications, multiuser systems, low-latency links and joint sensing/communications. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Foundational digital/wireless communications research including OFDM decoding and network information theory.

PUBLIC LITIGATION EXPERIENCE

The reviewed Princeton profiles do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Broad theoretical profile; product firmware, standards implementation and accused hardware still require separate hands-on analysis.

[Source 1](#) | [Source 2](#)

[Draft email](#) | poor@princeton.edu | [public email source](#)

08 Randall Berry

Chair and John A. Dever Professor of Electrical and Computer Engineering, Northwestern University

TECHNICAL FIT

Wireless networks, spectrum allocation, pricing and resource optimization fit cooperative agents, auctions, adaptive channel/resource control and game-theoretic negotiation. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Research and teaching in advanced wireless networks, heterogeneous-network pricing and bandwidth allocation.

PUBLIC LITIGATION EXPERIENCE

The reviewed Northwestern profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Network-economics strength is less direct for RF antenna hardware, LDPC implementations and specific access-point source code.

[Source 1](#) | [Source 2](#)

[Draft email](#) | rberry@northwestern.edu | [public email source](#)

Candidates 9-10 for further diligence

09 Danijela Cabric

Professor of Electrical and Computer Engineering, UCLA

TECHNICAL FIT

Wireless system design, machine learning for wireless, sensing and software-defined radio fit adaptive RF control, channel tracking and implementation testing. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

Leads Cognitive Reconfigurable Embedded Systems Lab; experimental SDR and embedded-platform research.

PUBLIC LITIGATION EXPERIENCE

The reviewed UCLA profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Less specialized in Wi-Fi standards history or economic-agent auction mechanisms; may require protocol-specific supplementation.

[Source 1](#)

[Draft email](#) | danijela@ee.ucla.edu | [public email source](#)

10 Daniel W. Bliss

Professor and Director, Center for Wireless Information Systems and Computational Architectures, Arizona State University

TECHNICAL FIT

MIMO wireless, cooperative communications, signal processing and RF systems fit adaptive antennas, channel estimation and distributed wireless control. Matter-specific fit: CommScope/Ruckus access points, adaptive bandwidth, hybrid beamforming, MU-MIMO legacy support and dynamic channels.

RELEVANT WORK

More than 300 technical articles; prior MIT Lincoln Laboratory work and research spanning theory through implementation.

PUBLIC LITIGATION EXPERIENCE

The reviewed ASU profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Radar and broad RF-system work may be less tailored to Wi-Fi MAC/registration software or claim-specific auction logic.

Preliminary candidates; no conflicts or availability determination

- Run party, affiliate, counsel, inventor, funder, and technology conflicts.
- Confirm testimony history, exclusions, compensation, publications, patents, and deposition performance.
- Investigate licensing, grants, consulting, commercial interests, and prior technical positions.
- Confirm role fit, availability, and interest only after counsel authorizes outreach.

ONGOING MATTER-SPECIFIC RESEARCH

Flint Witness Research works in the post-filing window, turning pleadings and public technical records into issue maps, researched candidate slates, and diligence starting points as the case develops.
