

Storage Vectors v. Advantech Co., Ltd.

Storage optimization that allegedly uses different physical storage-format attributes for general-purpose versus error-tolerant or streaming data on one medium.

Independent preliminary research based on public information.

VERIFIED PUBLIC RECORD

Storage Vectors LLC v. Advantech Co., Ltd., No. 2:26-cv-00730, filed 2026-08-21 in E.D. Tex..

LIKELY RESEARCH PURCHASER

Isaac Phillip Rabicoff - Rabicoff Law LLC; named matter counsel. The public docket names Rabicoff as plaintiff counsel, complaint filer, and filer of all opening papers. Selecting him as likely purchaser is an analytical inference from that role.

isaac@rabilaw.com - publicly listed on the [official firm biography](#); not inferred.

TECHNICAL FRAME

Storage optimization that allegedly uses different physical storage-format attributes for general-purpose versus error-tolerant or streaming data on one medium.

Secondary-source limitation: This is a preliminary technical frame based on public sources. Filed pleadings, claim charts, discovery, source code, product versions, and admissible evidence must control. [Open public synopsis](#)

Questions likely to require expert input

This issue map is a research plan, not a legal conclusion. The filed complaint, patent exhibits, intrinsic record, and discovery must control.

01 Whether one physical medium stores general-purpose and error-tolerant or streaming data using different claimed physical-format attributes.

Whether one physical medium stores general-purpose and error-tolerant or streaming data using different claimed physical-format attributes.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

02 Which layer selects those attributes

Which layer selects those attributes: application, file system, controller firmware, flash translation layer or storage device.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

03 How error correction, sector/page geometry, redundancy, compression or recording density differ across data classes.

How error correction, sector/page geometry, redundancy, compression or recording density differ across data classes.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

04 What firmware, device specifications, images, traces and destructive testing can prove actual on-medium formatting rather than logical labeling.

What firmware, device specifications, images, traces and destructive testing can prove actual on-medium formatting rather than logical labeling.

Potential evidence: Pleadings and claim charts; source code or engineering records; product and version documentation; standards and prior art; reproducible testing; and fact or technical testimony as applicable.

Questions likely to require expert input

Candidates 1-2 for further diligence

Ranked for preliminary research priority based on subject-matter fit, relevant public work, testimony, and visible diligence burden. This is not a retention recommendation.

01 Steven Swanson

Professor and Director, Non-Volatile Systems Laboratory, UC San Diego

TECHNICAL FIT

Solid-state storage, persistent memory, SSD architecture and error correction fit physical-format attributes, workload-specific layout and storage reliability. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Built NOVA, Orion and Onyx; published on programmable solid-state storage and flash failure/error-correction mechanisms.

PUBLIC LITIGATION EXPERIENCE

The reviewed UCSD profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Modern NVM/SSD emphasis may not map perfectly to older claimed media-format distinctions or streaming-data semantics.

[Source 1](#) | [Source 2](#)

[Draft email](#) | swanson@cs.ucsd.edu | [public email source](#)

02 Ethan L. Miller

Professor Emeritus and Veritas Presidential Chair in Storage Emeritus, UC Santa Cruz

TECHNICAL FIT

File/storage systems, archival media, data classification and device reliability fit data-type-aware storage formats and medium-level behavior. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Co-developed Ceph; more than 170 papers and over 200 patents; industry work with Pure Storage, NetApp and Veritas.

PUBLIC LITIGATION EXPERIENCE

The reviewed UCSC profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Emeritus status and broad systems focus; claim analysis may require a specialist in the exact physical recording format.

[Source 1](#) | [Source 2](#)

[Draft email](#) | elm@ucsc.edu | [public email source](#)

Candidates 3-4 for further diligence

03 Remzi Arpaci-Dusseau

Vilas Distinguished Achievement Professor and Grace Wahba Professor of Computer Sciences, UW-Madison

TECHNICAL FIT

Storage/file systems, operating systems and reliability fit logical-to-physical placement, workload policy and system behavior. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

ACM Fellow for storage and computer systems; co-leads ADSL and co-authored Operating Systems: Three Easy Pieces.

PUBLIC LITIGATION EXPERIENCE

The reviewed UW-Madison profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Primarily OS/file-system layer rather than media physics, physical-sector formats or patent-specific claim construction.

[Source 1](#)

[Draft email](#) | remzi@cs.wisc.edu | [public email source](#)

04 Andrea Arpaci-Dusseau

Susan Beth Horwitz WARF Professor and Catherine A. Erickson Professor of Computer Sciences, UW-Madison

TECHNICAL FIT

Operating, storage and distributed systems fit data placement, reliability and software-controlled distinctions among storage workloads. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Co-leads ADSL; extensive storage/file-system research and practical systems impact.

PUBLIC LITIGATION EXPERIENCE

The reviewed UW-Madison profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

System-software focus is less direct for physical medium attributes or hardware-controller reverse engineering.

[Source 1](#)

[Draft email](#) | dusseau@cs.wisc.edu | [public email source](#)

Candidates 5-6 for further diligence

05 Bianca Schroeder

Professor and Canada Research Chair in Data Centre Technologies, University of Toronto

TECHNICAL FIT

Large-scale storage reliability and empirical failure analysis fit error tolerance, format tradeoffs and behavior under different data classes. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Industry collaborations with Google, Microsoft and NetApp; award-winning work on storage-system reliability.

PUBLIC LITIGATION EXPERIENCE

The reviewed Toronto profiles do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Reliability/data-center emphasis is broader than the particular patented physical-format attribute and single-medium implementation.

[Source 1](#) | [Source 2](#)

[Draft email](#) | bianca@cs.toronto.edu | [public email source](#)

06 Gregory Ganger

Jatras Professor of Electrical and Computer Engineering, Carnegie Mellon University

TECHNICAL FIT

Storage subsystem architecture, active storage and disk characterization fit controller behavior, physical/logical formatting and workload-aware storage. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Led storage-system research including DiskSim, active disks and high-performance storage architectures.

PUBLIC LITIGATION EXPERIENCE

The reviewed CMU profiles do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Academic architecture emphasis may need supplementation with current Advantech product teardown and firmware evidence.

[Source 1](#) | [Source 2](#)

[Draft email](#) | ganger@ece.cmu.edu | [public email source](#)

Candidates 7-8 for further diligence

07 Hakim Weatherspoon

Professor of Computer Science, Cornell University

TECHNICAL FIT

Fault-tolerant distributed and archival storage fit error-tolerant data handling, durability choices and storage-control architecture. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Ph.D. on distributed wide-area archival storage; research in fault tolerance, reliability, performance and secure storage.

PUBLIC LITIGATION EXPERIENCE

The reviewed Cornell profile and CV do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Distributed/archival focus is less direct for on-medium physical formats and embedded controller implementation.

[Source 1](#) | [Source 2](#)

[Draft email](#) | hweather@cs.cornell.edu | [public email source](#)

08 Vijay Chidambaram

Associate Professor of Computer Science, University of Texas at Austin

TECHNICAL FIT

Next-generation storage systems, crash consistency and reliability fit how storage attributes are selected, persisted and tested. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Leads UT Systems and Storage Lab; publications on crash testing, authenticated storage and file-system consistency.

PUBLIC LITIGATION EXPERIENCE

The reviewed UT profile does not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Software/reliability depth is less direct for recording-media physics and may require an additional controller/device specialist.

[Source 1](#)

[Draft email](#) | vijay@cs.utexas.edu | [public email source](#)

Candidates 9-10 for further diligence

09 Heiner Litz

Associate Professor of Computer Science and Engineering and Director, Storage Systems Research Center, UC Santa Cruz

TECHNICAL FIT

Programmable storage, OpenChannel SSDs and storage disaggregation fit configurable physical formats and device/controller allocation. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Research on LightNVM/OpenChannel SSDs, computational storage and machine learning for storage systems.

PUBLIC LITIGATION EXPERIENCE

The reviewed UCSC profiles do not identify expert-testimony work.

POINTS FOR FURTHER DILIGENCE

Academic prototypes may differ from the accused commercial platform and exact asserted patent priority-era technology.

[Source 1](#) | [Source 2](#)

[Draft email](#) | hlitz@ucsc.edu | [public email source](#)

10 Darrell D. E. Long

Distinguished Research Professor of Engineering and Distinguished Professor Emeritus, UC Santa Cruz

TECHNICAL FIT

Storage architecture, metadata, deduplication, archival systems and performance fit physical/logical format distinctions and data-class policy. Matter-specific fit: Advantech storage optimization using data-class-dependent physical storage-format attributes.

RELEVANT WORK

Founder of USENIX FAST; contributions to scalable storage, metadata separation and reliable archival systems.

PUBLIC LITIGATION EXPERIENCE

The reviewed UCSC directory identifies intellectual-property expertise but does not identify a specific testimony or litigation engagement.

POINTS FOR FURTHER DILIGENCE

Emeritus-stage and broad storage-architecture profile; device-level reverse engineering and claim-specific media physics may need separate support.

Preliminary candidates; no conflicts or availability determination

- Run party, affiliate, counsel, inventor, funder, and technology conflicts.
- Confirm testimony history, exclusions, compensation, publications, patents, and deposition performance.
- Investigate licensing, grants, consulting, commercial interests, and prior technical positions.
- Confirm role fit, availability, and interest only after counsel authorizes outreach.

ONGOING MATTER-SPECIFIC RESEARCH

Flint Witness Research works in the post-filing window, turning pleadings and public technical records into issue maps, researched candidate slates, and diligence starting points as the case develops.
